EDUCATION

Sri Krishna College of Technology

Bachelor of Technology in Information Technology — GPA: 7.78/10

Coimbatore, TN

Expected Sep. 2027

Mount Park Higher Secondary School

Mathematics - Computer Science — GPA: 8.6/10

Thiyagadurgham, TN

May 2022 – May 2023

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL, Solidity

Frameworks: Spring Boot, React

Developer Tools: Git, Docker, Docker Compose, Maven

Databases: MySQL, MariaDB, PostgreSQL, Redis

Monitoring: Prometheus, Grafana, Micrometer

Operating System: Linux (Arch, Debian)

Core CS: Data Structures & Algorithms, OOP, Distributed Systems, Concurrency & Multi-threading, Blockchain Fundamentals

PROJECTS

Distributed Job Processor | *Spring Boot, Redis, PostgreSQL, Docker, Prometheus, Grafana* Mar. – Apr. 2026

- Engineered a fault-tolerant distributed task queue processing jobs across multiple worker containers with at-least-once delivery guarantees
- Implemented atomic job claiming via Redis BLMOVE and distributed locks to prevent duplicate execution across concurrent workers
- Built exponential backoff retry pipeline (10s→20s→40s) with dead-letter queue for jobs exceeding 4 attempt limits
- Designed Reaper service for crash recovery — detects stuck jobs in processing queue and reclaims them every 15 seconds
- Built Reconciliation service ensuring Redis/PostgreSQL consistency — restores missing or corrupted job metadata from source of truth
- Instrumented 13 custom Micrometer metrics (counters, gauges, timers) exported to Prometheus with live Grafana dashboard for queue depth, throughput, and failure rate visibility
- Containerized all services with Docker Compose — producer, 2 workers, maintenance, Prometheus, Grafana as isolated containers

Mass Campaign Manager | *React.js, Tailwind CSS v4, Context API*

May 2026 – Present

- Architected a React-based control panel to orchestrate and monitor high-throughput mass deployment campaigns and job executions.
- Engineered a global, persistent theme-switching engine (Light/Dark mode) utilizing React Context API, custom hooks, and localStorage.
- Designed a real-time system dashboard interface to visualize critical metrics such as active worker nodes, queue capacities, and execution success rates.

Decentralized Voting Smart Contract | *Solidity, Ethereum*

May 2025

- Developed Ethereum smart contract enabling decentralized poll creation and voting
- Implemented one-vote-per-address validation using address mapping
- Optimized storage using bytes32 instead of string to reduce gas costs
- Deployed and tested contract on Ethereum Sepolia and zkSync testnets
- Integrated event logs for poll creation and vote tracking

ACHIEVEMENTS

Solved **190+** algorithmic problems on LeetCode covering arrays, hashing, trees, graphs, dynamic programming, and backtracking

Completed **Google Git & GitHub Professional Certificate** on Coursera

Earned **Java (Basic)** certification from HackerRank
